Morpho - Bug #605

When Trying to Resize Columns in Dataview, Column Becomes Selected

09/28/2002 09:43 AM - Matthew Brooke

Description

In the header row of the data table, if the user tries to drag the separators to make the columns wider/narrower, the column is selected. This could be bad if the user has already made a selection of cells in the table - the selection would be lost. Also, MetaViewer changes from Entity to Attribute when col is selected (less of a problem, but still annoying if user is only trying to resize columns)

The column should be selected only if the user clicks on the header; if the user clicks and drags the separator, the column should not be selected (see mouselistener code for table header in file->open dialog: this sorts if the user clicks, but resizes without sorting if the user drags the dividers)

History

#1 - 10/01/2002 11:18 AM - Dan Higgins

moved MousePressed handler code for header to appear in MouseClicked event. This allows column size settings to be carried out without changing the selection
