Description			
<p>I was showing Lauren how to use the perl lib to transfer test content from one Metacat to her localhost and we got this error for old EML beta6 access docs"</p>			
<pre>error msg: AccessControlList.insertPermissions(): ERROR: column "docid" of relation "xml_access" does not exist</pre>			
<p>This was an oversight when we moved to using guid instead of docid for the xml_access table.</p>			
<p>I am not terribly worried about this since those documents really aren't supported any more, but I would like the SQL to be correct nonetheless.</p>			
<p>Example file: obfs.147.2</p>
