Description

I was showing Lauren how to use the perl lib to transfer test content from one Metacat to her localhost and we got this error for old EML beta6 access docs"

Estimated time:

0.00 hour

error msg: AccessControlList.insertPermissions(): ERROR: column "docid" of relation "xml_access" does not exist

This was an oversight when we moved to using guid instead of docid for the xml_access table.

I am not terribly worried about this since those documents really aren't supported any more, but I would like the SQL to be correct nonetheless.

Example file: obfs.147.2
