Description

Instead of having the perl code generate the catcha content, the template can include the ajax-style of constructing the captcha. This will allow us to use the same method when we include the registration form in the MetacatUI as well.

See:
https://developers.google.com/recaptcha/docs/display?csw=1#AJAX
http://stackoverflow.com/questions/7261436/how-can-i-load-a-recaptcha-form-using-jquery-ajax-while-leaving-the-recaptcha-sc

History

#1 - 09/20/2013 07:50 AM - ben leinfelder

- Assignee changed from ben leinfelder to Jing Tao

I included the ajax-style of recaptcha, but need to verify that it works. Jing - do you foresee any issues with using this method?

#2 - 09/20/2013 08:33 AM - ben leinfelder

This is now rendering on dev2. I did not know the private key for our recaptcha config, so it needs to be tested when that is reconfigured with the correct values.

#3 - 09/20/2013 10:59 AM - ben leinfelder

- Status changed from New to Closed

- translation missing: en.field_remaining_hours set to 0.0

Works as expected now.
