

Morpho - Bug #614

save menu item for user-initiated saves

09/30/2002 01:56 PM - Matt Jones

Description			
<p>Currently, various buttons in the Morpho UI cause individual files to be saved and a new version of the file and package to be created. Need to change this so that there is an explicit "Save" menu that the user selects when they want to save their changes. Before save is selected, we need to store the accumulated changes in temporary files, and only increment revision numbers when the save occurs. This should allow a user to change several metadata modules and the data independently, and yet only revise the package once for the whole suite. This should cut down on the rampant revisions problem, and be clearer to the user how things work.</p> <p>As part of this bug, remove all "Update", "Cancel", and other buttons that are related to saving. This will probably involve movement to the new Jalama editor, so assigning to brooke for now, but we'll revisit this decision later.</p>			

History

With the new AbstractDataPackage approach, implementing a "Save" should be relatively easy. The "Save" menu should serialize the current DataPackageDOM into the appropriate location (local or metacat), perhaps asking the user where to Save if the package has never been saved before.

#2 - 12/16/2003 08:26 AM - Dan Higgins

A 'Save' menu item has been implemented to work with the new eml2 version of morpho and the new AbstractDataPackage class.
