

MetacatUI - Task #6146

Task # 5984 (Resolved): Create Lab/Group/Org view of the system

Add configurable 'filter' to select just data from that group

10/16/2013 12:36 PM - Matt Jones

Description

When viewing a repository, should be able to configure the skin to list just one group's content by applying a fixed search filter to all queries. The search filter should be configurable, such that some groups might filter on a particular keyword, while others might filter on a particular creator. The filter for each group should be configurable in a list for the skin, using SOLR syntax, conceptually like this:

```
group.1.name=SNAP
group.1.filter=keyword:SNAP
group.2.name=Connell Lab
group.2.filter=keyword:Connell Lab
```
