

MetacatUI - Task #6152

Story # 6148 (Closed): Create SNAP skin with support for working group filters

Create metacat skin for metacatui-snap

10/16/2013 02:20 PM - Matt Jones

Status:	Rejected	Start date:	10/16/2013
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	1.2.0	Spent time:	0.00 hour
Description			
Metacat skins are used to configure the registry. Create a snap skin in metacat that allows us to configure the registry for use with SNAP, including the addition of the SNAP keyword to all SNAP datasets.

- Status changed from New to Rejected
- translation missing: en.field_remaining_hours set to 0.0

For simplicity, we should use the single pre-existing "metacatui" skin in the Metacat server and let the UI themes do any augmentation that is needed. The more we can get away from Metacat skin-based development the better. Right now the UI can add one or more keywords to the entry form (dynamically after the form loads) and can include a text field or select widget for choosing which Working Group is a co-creator. Neither of these features require a new Metacat server skin.
