

Morpho - Bug #617

After updating a data file, entity, attribute and physical document version is not consistent in local and metacat

Bugzilla-Id:	617		
<div>Description</div> <p>When I created new data package, local and metacat has same version(1)in each file.</p> <p>However, if data file was changed in data table and update button was clicked. It was found dataset, datafile, entity, attribute, physical were updated to version 2 in local. But in metacat, only dataset and datafile updated to version 2, the others still keep version 1. Actually, only data file was updated and entity, attribute file would still keep in version 1.</p>			

History

#1 - 10/03/2002 07:53 AM - Dan Higgins

Documents were being incorrectly written to metacat dus to readers not being reset to beginning of stream after writing local copies (for case where both local and metacat docs were being updated.

Fixed by closing readers and recreating after local doc changes saved.
