

Kepler - Bug #6175

GenericJobSubmission actor sometimes runs job without completing data transfer.

Description			
<p>A Kepler user at UCSD found that the GenericJobSubmission actor in her workflow started job submission when only partial file is copied. It looks the actor mistakenly thinks the file is ssh-copied completely when file transferred in the cluster is still about 1 MB less than the file on the local machine. The scheduler of the cluster is SGE.</p> <p>When we use 'SSH File Copier' actor, the file is copied completely.</p>
