#### Description

Fixed Field data files are not handled in either the TextImportWizard or the DataView classes. Thus metadata must be entered by user and display will simply be of the data as text with no editing. This should be corrected.

A 'work-around' is to import a fixed width date file into Excel and then save as a tab delimited file before import into a datapackage.

#### History

##### #1 - 12/04/2002 10:33 AM - Dan Higgins

Postponed to 1.4 due to lack of time. This is a relatively large task and cannot be done quickly. [I am assuming we want a visual interface similar to that in Excel which allows the user to select field boundaries by 'dragging; field boundy indicators around.]
