

EML - Feature #6283

add field to reference data usage citations

12/06/2013 07:51 AM - Matt Jones

Status:	New	Start date:	12/06/2013
Priority:	Normal	Due date:	
Assignee:	Matt Jones	% Done:	0%
Category:	eml - general bugs	Estimated time:	0.00 hour
Target version:	EML2.2.0	Spent time:	0.00 hour
Bugzilla-Id:			
Description			
Consider adding an optional top level field to eml-dataset to provide this, possibly something like: /eml/dataset/dataUsageCitation which would be of type CitationType See discussion on eml-dev regarding this issue: http://lists.nceas.ucsb.edu/eoinformatics/pipermail/eml-dev/2013-December/002004.html			

History

Here's a proposed element definition for the /eml/dataset/citation field. I have preliminarily checked this into EML trunk (r2344) for incorporation in the next release. As it is optional and at the end of the dataset fields, it should be fully backward compatible with prior versions of EML.

```
<xs:element name="citation" type="cit:CitationType" minOccurs="0" maxOccurs="unbounded">
  <xs:annotation>
    <xs:appinfo>
      <doc:tooltip>Data Citation</doc:tooltip>
      <doc:summary>A citation to articles or products in which the
dataset is used or referenced.</doc:summary>
      <doc:description>A citation to articles or products in which the
dataset is used or referenced. The citation element contains
general information about a literature resource that has used or
references this dataset resource.
      </doc:description>
    </xs:appinfo>
  </xs:annotation>
</xs:element>
```
