Description			
Version 16.0.2 of Firefox is not displaying almost anything correctly - there are a couple errors of "Syntax error: invalid quantifier" pointing to jQuery.js			

History

#1 - 12/31/2013 10:58 AM - Lauren Walker

- % Done changed from 0 to 40

I've found that the embedded Javascript in the search.html template for DataCatalogView is causing this error. I suspect there is a JS character messing with the regular expression in the .html() function of jQuery (line 6067).

#2 - 12/31/2013 01:29 PM - Lauren Walker

- Status changed from New to Resolved

Finally figured out that the minimum year and maximum year inputs were including the quotation marks inside the JS for the value attribute, which was causing an error, so I just simplified it to `<%=x%>` instead of printing the quotation marks via `print()`

And the 'invalid quantifier' error was caused by the pattern attribute on these inputs, which was interfering with the regular expression function acting on it via the .html() jQuery function. So I removed that attribute altogether since it isn't necessary.

Some other small style changes were made to make it look better in Firefox 16.
