Metacat - Task #6347

Feature # 6346 (Resolved): Make # READ events available in SOLR index

Create mechanism for adding name/value pairs to the solr index

01/03/2014 09:49 AM - ben leinfelder

Target version:	2.4.0		**Spent time:**	0.00 hour

Description

For use with getting READ even counts into the object index and also for adding semantic annotation facets into the index. Something like this:

```
IndexFieldQueue.add(Identifier id, Map<String, Object> singleValueFields)
IndexFieldQueue.add(Identifier id, Map<String, <List<Object>> multiValueFields)
```

That would be called in the main Metacat webapp and metacat-index would be listening for these sorts of events and would add them to the index as needed.

History
