Bugzilla-Id:	64		
Description			
Trying to open a document in mde fails because the comparison of the document publicID with the publicID stored in the mde options fails, even if they apparently match.			

History

#1 - 08/18/2000 02:56 PM - Matt Jones

Determined that the comparison fails because the publicid is actually compared with the options document root name, rather than the options document public id. Fixed this problem by changing IBMParser.java to compare against the publicID.
