<b>Description</b>			
<p>I have a task to handle white spaces in the pids in the dataone production environment: <a href="https://redmine.dataone.org/issues/3492">https://redmine.dataone.org/issues/3492</a></p> <p>I checked the code in the create and update method in the member node API of DataONE and found that the document will be rejected if its pid has white spaces.</p> <p>So I believe those came from the Metacat API. I would like to add the enforcement that Metacat will reject a document if its docid contains white spaces in the inser/upload and update.</p> <p>If you have any concern, please let me know.</p>

We added the code in the handleUpload, handleInsertOrUpdate and handleMultiPartInsertAction methods to enforce there is no white spaces in the docid.
