

MetacatUI - Bug #6425

Registry modal help screen has badly-offset headers (similar to EML documentation)

Description			
In the registry page, there are "?" links that show a modal window -- that content could use some css attention on the headers. (I was using the KNB theme.)

- Status changed from New to Resolved

The CSS that makes these headers look weird has been changed so that only elements on certain pages are selected - About, Tools, and the external EML docs. On the master and 1.4 branch. Should be ready to ship with Metacat 2.4.1
