MetacatUI - Bug #6477

install of MetacatUI at KNB root causes EML parser to fail

Description

It seems the EML parser web service is no longer parsing XML files properly, and seems to be related to a redirect issue that probably arose when we moved to using MetacatUI at the root. Need to be sure the EML Parser continues to work at its original URL. This arose as a problem for the R EML package -- see report here: https://github.com/ropensci/EML/issues/105

- Status changed from New to In Progress

- Assignee changed from Lauren Walker to ben leinfelder

I tried it (just in the browser) and it worked for me...
"Document is XML-schema valid. There were no XML errors found in your document."

Can you change the url in the R package to use "https"?

- Status changed from In Progress to Resolved

They just needed to change the URL to use https
