#### Description

Currently only entire datapackages can be deleted. We need the ability to delete data files and individual metadata modules.

1) Add a 'Delete Data...' to the Data menu for deleting data that is the current entity. Add a dialog asking if only the data should be removed, or the data and all associated metadata (i.e. the entire entity, attributes, physical info, etc.)

2) Add a 'Delete' button to each metadata display area so that the user can delete selected metadata modules. May need to ask (or warn) about the consequences of removing certain modules that have submodules.

#### History

##### #1 - 12/16/2003 08:29 AM - Dan Higgins

This functionality is now 'automatically' handled with the single xml tree of eml2. Any part of the tree can be removed using the XML editor (subtree deletion).
