<b>Description</b>			
In the "Other Entity" or other data details sections, use the "entity name" from EML rather than the object ID, if available.			

### History

Each DataONE object will need a title/name indexed so the provenance statements can access titles for metadata and data without parsing EML files.

Issue [#89](https://github.com/DataONEOrg/sem-prov-design/issues/89) (<https://github.com/DataONEOrg/sem-prov-design/issues/89>) in the DataONE sem-prov project.

Be sure to use the filename or entity name in the tabular listing of the data files as well. We used to display filenames in that list, and we've reverted back to identifiers, which are hard to understand. I got another request for this today from Melanie.
