

Kepler - Bug #6615

apple-extensions does not compile with java 8

11/02/2014 01:28 PM - Daniel Crawl

Status:	Resolved	Start date:	11/02/2014

Target version:	2.5.0	Spent time:	0.00 hour
Bugzilla-Id:			
Description <p>The apple-extensions module does not compile with java 8 because the package com.apple.eawt is no longer on the default classpath. Prior to java 8, these classes were in ui.jar, but are now in rt.jar, which is not used by javac. I tried explicitly adding rt.jar to the classpath, but javac still fails.</p> <p>A workaround is to comment out this module from the Kepler suite.</p>

- Status changed from New to Resolved

Apple no longer supports the API used this module, so I've removed it from the Kepler suite.
