Target version:	2.4.2	Spent time:	0.00 hour

Description

Please see the bug: <https://redmine.dataone.org/issues/6011> :

After the upgrade to Java7, I began seeing the following messages in the logs:

```
[DEBUG] 2014-07-28 09:07:31,559 (ObjectListHarvestTask:call:162) Sleeping for 5  
secs. hzSyncObjectQueue has 50000 # of objects.
```

The SyncObjectTask thread appeared to have stopped running. Dyrad during this time has been sending back records to listObjects even when there were none to process each time synchronization ran.

It is possible that there is a bug in the way that hazelcasts IQueue IQueue.size() method tracks the number of records on the queue.

Or there might be an Exception in SyncObjectTask that I have not discovered an Exception/trace for in the log files

History

#1 - 11/19/2014 03:52 PM - Jing Tao

- translation missing: en.field_remaining_hours set to 0.0

- Status changed from New to Closed

updated to the new version and didn't see any issue so far.
