<b>Target version:</b> 1.7.0	<b>Spent time:</b> 0.00 hour
<b>Bugzilla-Id:</b>	
<b>Description</b> Example: A user navigating to knb.ecoinformatics.org/#view/data.1.1 will be redirected to knb.ecoinformatics.org/#view/metadata.1.1 or the app will just render the corresponding metadata view and keep the URL the same. Will need to think about which one is more user-friendly...  Currently, a user receives a message that the ID is invalid which isn't true...
