

MetacatUI - Task #6647

Story # 6598 (Resolved): Add Provenance to the DataCatalog and Metadata views

Expand the SolrResult model to include provenance index fields

01/15/2015 02:40 PM - Lauren Walker

Status:	Resolved	Start date:	01/15/2015

The model will also need to store whether or not that index field points to a source or derivation of that Solr doc so the UI knows whether to draw that on the left or right side of the UI. A presentation-language version of the field (and possibly all fields) will be usual as well went presenting the provenance in the UI.

#2 - 01/21/2015 09:10 AM - Lauren Walker

- Status changed from New to Resolved
- translation missing: en.field_remaining_hours set to 0.0

I also added some helper functions to do the following:

- Retrieve all the field names that are provenance-related
- Find out if a SolrResult has a provenance trace
- Determine whether a SolrResult field is a provenance field that points to either a source entity or a derivation entity (helpful for drawing the ProvChartView where sources are drawn on the left and derivations on the right)
