Description

It looks like RequireJS can cache bust with some configuraiton: <http://requirejs.org/docs/api.html#config>

Because it's annoying to us and our users when we update or fix the KNB and have to remind them to clear their browser cache to see their bug fixed.

History

#1 - 03/02/2015 10:41 AM - Lauren Walker

- Status changed from New to Resolved

All stylesheets and custom scripts, and most images are now loaded with a URL argument equal to the MetacatUI version. This ensures that users will always see the most recent changes when we update MetacatUI. The metacatUIVersion variable is set on loader.js. The loader.js script itself has a manually set URL argument in index.html but shouldn't have to be changed too often.
