

MetacatUI - Feature #6722

Remove the "search for data" textbox when on the search/DataCatalog view

Description			
I found that it confuses users because it can be mistaken as another filter box that will add on your search term to the current list of filters. It is not needed when already on the search view.

- Status changed from New to Resolved

Based on general feedback, this textbox was confusing so I removed it from the DataONE, KNB, and default themes.
