#### History

##### #1 - 02/15/2003 12:05 PM - Michael Lee

fixed headers and footers sitewide. Gabe has updated stylesheets to use the same properties file to read header and footer. Updating header/footer sitewide now consists of updated the properties file, then building that to the server, then updating forms/general/history ... etc. The html files on the server are static - the header and footer are added during the build process via ant, not dynamically when a user requests to see a page.
