<b>Description</b>			
<p>I was able to hang Morpho sometimes when exporting a newly-created data package.</p> <p>Summary of my environment:</p> <ul style="list-style-type: none"><li>- OS: Mac OS X 10.10.5</li><li>- JRE: 1.8.0_51-b16</li><li>- Morpho: 1.11.0</li></ul> <p>Steps to reproduce:</p> <ul style="list-style-type: none"><li>- Open Morpho (Mac application form of it, launched via the Finder)</li><li>- Click File &gt; Create new data package</li><li>- Enter information for 'Title', 'Owner', 'Contact', hitting next and accepting defaults for all other fields.</li><li>- Click Finish in the new data package wizard</li><li>- Save the data package using File &gt; Save, and leave 'Save Locally' checked and click "Save"</li><li>- Attempt to export the package using File &gt; Export, leave 'Export to a Directory' selected and click 'Export'</li><li>- Observe that the program is now hung.</li></ul> <p>The last step sometimes works and sometimes doesn't. I haven't determined what I'm doing that makes it hang sometimes and not other times.</p>
