Description			
<p>I was able to hang Morpho sometimes when exporting a newly-created data package.</p> <p>Summary of my environment:</p> <ul style="list-style-type: none">- OS: Mac OS X 10.10.5- JRE: 1.8.0_51-b16- Morpho: 1.11.0 <p>Steps to reproduce:</p> <ul style="list-style-type: none">- Open Morpho (Mac application form of it, launched via the Finder)- Click File > Create new data package- Enter information for 'Title', 'Owner', 'Contact', hitting next and accepting defaults for all other fields.- Click Finish in the new data package wizard- Save the data package using File > Save, and leave 'Save Locally' checked and click "Save"- Attempt to export the package using File > Export, leave 'Export to a Directory' selected and click 'Export'- Observe that the program is now hung. <p>The last step sometimes works and sometimes doesn't. I haven't determined what I'm doing that makes it hang sometimes and not other times.</p>
