Category:			**Estimated time:**	0.00 hour
Target version:	1.9.0		**Spent time:**	0.00 hour

Description

On Mac and Windows, test on Chrome 46.X and 47.X, Firefox 41, 42 and 38, IE 9, 10, and 11, and Safari 9.X, all of which compromise ~92% of our users of DataONE Search (from Google Analytics, Nov 9 - Dec 9). - Note that IE 9 and 10 are in the top 92% but still are only 0.5% of our users (about 5 sessions each, out of 830).

- Test auth tokens on search.test.dataone.org with all browsers
- Test the KNB and Default themes since most development is done in the DataONE theme
- Make sure auth tokens are working with log in and viewing private content in all browsers
- Check for glaring issues with the styling on mobile devices - most common mobile resolutions are 320x568, 360x640, 375x667, and 414x736. These still make up a very small percentage of our DataONE Search users.

IE 9 still doesn't like CORS AJAX requests, which means it cannot let a user log in unless we use the proxy on the /portal calls to. We either need to drop IE9 log-in support or add all /portal requests to the ProxyPass Apache config

- Estimated time set to 0.00 h

Ben and I made the executive decision to not have login support for IE 9 users (only 0.5% of our sessions on search.dataone.org, from Nov-Dec

2015, via Google Analytics). IE 9 users can still use all other MetacatUI features, just no login. Otherwise, we would have to route all portal requests through a proxy, which we have not tested yet and may not want to do.
