| <p>Trying to find a data object using the search window on the GoA MN sometimes returns the correct package and sometimes returns no results, even though all items searched are real objects. I have tried using firefox and chrome on a mac and Rachael had similar success/failure on a PC (not sure what browser). For example: searching for the data table csv file: df35b.249.2, does not return any results but searching for an R script in the package (df35b.250.3) returns the correct package (df35b.273.6). Also, searching by the metadata id (df35b.273.6) works as it should also.</p> |               |                        |            |
