Description			
Consider using the value from the v2 sysmeta 'fileName' element for the 'name' column of a dataset.			

History

#1 - 12/17/2015 09:24 AM - Lauren Walker

- Target version changed from 1.9.0 to 1.9.1

#2 - 12/17/2015 11:30 AM - Lauren Walker

- Status changed from New to Resolved

- Target version changed from 1.9.1 to 1.9.0

If the fileName solr index field is available, it will be used in the Metadata View table and provenance charts. Next, the views will use the entity name from the EML if available, and lastly resort to the ID.
