Description			
Jessica Couture brought an issue to my attention - she created a group on search.dataone.org and then when she goes to view her group profile, the page is blank and nothing renders			

History

#1 - 01/19/2016 03:46 PM - Lauren Walker

There is a 500 Internal Server Error when trying to access `getSubjectInfo()` here:
<https://cn.dataone.org/cn/v2/accounts/CN=NCEAS-interns.DC=dataone.DC=org>

I created a `d1_identity` ticket in DataONE Infrastructure redmine.

MetacatUI needs to be able to:

- Display a message when there is a server error for this particular request
- But first try to query for the group via `/accounts/?query=...` as a backup

#2 - 01/19/2016 05:11 PM - Lauren Walker

- Status changed from *New* to *Resolved*

The 500 server error was being caused by a blank member in the group. Will create new ticket to check for blank values in form fields.

The UI will now use the accounts query service (`/accounts/?query=...`) as a backup source for group and person info when the usual `getSubjectInfo()` is unavailable.

If there is ultimately an error, the user model will be set to blank values so at least something is rendered
