

MetacatUI - Feature #6990

Show or link to parent data package when viewing a child data package

03/21/2016 05:24 PM - Bryce Mecum

Description			
When viewing a data package that is nested within another data package, it might be helpful to display the nesting relationship to the user. Right now, you only see an indication of the nesting relationship if you're viewing the parent data package, in which case you see the child packages. A breadcrumb style link might be enough. This would be useful for the ADC.
