Description

mde uses a temporary directory for storing copies of files when opening documents. If the directory is missing, file->open fails every time. Need to add code to mde to check for existence of tmp directory and create it if it is missing. The location of this tmp directory should also be configurable in case $mdehome is not writable.

History

#1 - 08/28/2000 08:21 AM - Dan Higgins

'tmp' directory now created if not present

#2 - 03/27/2013 02:13 PM - Redmine Admin
