

MetacatUI - Bug #7014

Private downloads don't work when logged in via ORCID/auth token

04/22/2016 08:51 AM - Chris Jones

Bugzilla-Id:			
Description <p>When logged in using the `arctic` theme on dev.nceas.ucsb.edu (i.e. via ORCID), the EML download link to the private metadata document that I created fails to download. We get:</p> <pre><?xml version="1.0" encoding="UTF-8"?><error detailCode="1400" errorCode="401" name="NotAuthorized"><description>READ not allowed on arctic-data.11256.1</description></error></pre> <p>An example is:</p> <p>https://dev.nceas.ucsb.edu/#view/arctic-data.11256.1</p> <p>The download button links directly to the /object REST endpoint:</p> <p>https://dev.nceas.ucsb.edu/knb/d1/mn/v2/object/arctic-data.11256.1</p> <p>My guess is that the `Authorization` header isn't getting set in this direct call, so with no auth token, it's seen as a public download.</p>

- Description updated
- #2 - 04/25/2016 08:55 AM - ben leinfelder
- That's an interesting issue - how to provide hyperlinks but include headers?
- #3 - 04/26/2016 11:02 AM - Lauren Walker
- Status changed from New to In Progress
- There is no way to include headers in an HTML link. What the UI can do is download the object via an XMLHttpRequest if it is not public.
- #4 - 04/26/2016 11:05 AM - ben leinfelder
- Yep, that's what I figured. Does that just happen in a new tab or something?
