History

#1 - 11/20/2000 08:17 AM - Michael Lee

just not time for these bugs in 1.0, pushed to 1.1

#2 - 11/30/2002 03:18 PM - Michael Lee

explore the ecoArt population of the VegBank community module to make sure that concepts are loaded as they should be. There should be a way to view the tables directly or indirectly provided by Harris or Farrell.

#3 - 02/24/2004 02:55 PM - Michael Lee

Plants done by MTL. Databases provided at:
<http://tekka.nceas.ucsb.edu/~lee/vegbranch/qa/> for Peet's inspection.
Communities have not been detailed QA yet.

#4 - 02/28/2004 11:23 AM - Michael Lee

QA of communities complete, data from doldrum:vegbank102. No errors-matches the ECOART version I had exactly.

There were a few minor issues regarding encoding, which we may have inherited errors from EcoArt, but our population of EcoArt to Vegbank is exactly right. GREAT!

#5 - 02/28/2004 11:25 AM - Michael Lee

The only thing I'd suggest is renaming some of the classSystem values (OK, all of them). Currently we have:
CEGL English Common NVC

These should be renamed:
code, NVC-Scientific translated, NVC-Scientific

This could be easily done with some SQL updates. Non-urgent.

#6 - 02/28/2004 11:33 AM - Michael Lee

I consider this bug essentially complete, therefore, move priority to 5.
We should double check once the data are in the final vegbank version that they indeed match the vegbank data that was used in the QA process.

Bob could also do some checking of problematic taxa to make sure it's right.
But the systematic QA of ecoArt/USDA to VegBank is done.

#7 - 03/01/2004 09:50 PM - Michael Lee

Bug complete for version 1.0.2

The final dataset for 102 release is identical to the datasets used in the QA process. Plants and Communities are populated (and encoded) correctly. New bug will be created, as there are 2 plants that were for some reason not originally added.

If Bob wants to look through these in VegBranch (which has an identical dataset to vegtest), that's fine. It will be in VegBranch 102 release.

#8 - 01/31/2005 10:27 AM - Michael Lee

best place to look for plant and comm QA, bob is on VegBank, using the queries for plant and communities, then seeing the comprehensive views of each plants and comms. Some fields are not displayed there (dates), but the general view of what's going on is there.
