Description

The base url looks like:
<https://mn-dev-ucsb-1.test.dataone.org/metacat/d1/mn>

It always gets 404 not found page. Even though Metacat on this node is running, users always think something is wrong. We need this url display the node information.

- Status changed from New to Closed

In the lib/web.xml.tomcat6 file, I added two servlet mappings:

```
<servlet-mapping>  
<servlet-name>MNRestServletV2</servlet-name>  
<url-pattern>/d1/mn/</url-pattern>  
</servlet-mapping>
```

```
&lt;servlet-mapping&gt;  
  &lt;servlet-name&gt;MNRestServletV2&lt;/servlet-name&gt;  
  &lt;url-pattern&gt;/d1/mn&lt;/url-pattern&gt;  
&lt;/servlet-mapping&gt;
```

This will lead the page to display the node information.
