Description

Before I reindexed the urn:uuid:dcdbdea1-573f-4696-8590-14d6876d8d7e document on mn-dev-ucsb-1, it had four values on this field:

```
<arr name="prov_wasDerivedFrom">  
<str>urn:uuid:64d8aacd-37e2-4441-80b0-375341cd04c1</str>  
<str>urn:uuid:54c8a361-b008-465a-bd4f-0760e5329e5a</str>  
<str>urn:uuid:86231c99-baa3-4921-aeaa-8f630f8594b9</str>  
<str>urn:uuid:55469e70-d7c5-48fc-9a39-1a37c302bb69</str>  
</arr>
```

However, after I reindexed it it only has one value on this field:

```
<arr name="prov_wasDerivedFrom">  
<str>urn:uuid:64d8aacd-37e2-4441-80b0-375341cd04c1</str>  
</arr>
```

This field is merged from the existing field. So this means our code only merges one value.

History

#1 - 12/09/2016 05:33 PM - Jing Tao

- Subject changed from *Index a document lost some prov information* to *ReIndexing a document lost some prov information in the new generated solr doc*

#2 - 12/12/2016 01:08 PM - Jing Tao

- Status changed from *New* to *Resolved*

Used a vector to store the multiple values and the new code worked.
