Metacat - Bug #7182

Allow partial package downloads when some of the objects are private

04/13/2017 08:10 AM - Lauren Walker

Description

When you try to download a package that has at least one private object, you get a 401 - Unauthorized response. When I am authorized to read at least one object in a package, I would expect to still be able to download the .zip package with those objects.

It's difficult for MetacatUI to tell when the "Download All" will fail, since it would need to check the /isAuthorized/{pid}?action=read result for every single object in the package, which can sometimes be >100. So right now we have an issue where users are getting a failed package download.
