Description

The MN.publish method will modify the eml document's content, but it doesn't compute the new checksum and only uses the old one to call the mn.update method. The mn.update didn't check the checksum ((see ticket <https://projects.ecoinformatics.org/ecoinfo/issues/7192>), so it worked. However, when we check the checksum in the mn.update method, it fails.

- Status changed from New to Resolved

Added code to change the checksum. It works right now.
