History

#1 - 04/19/2003 05:38 AM - Robert Peet

Not entirely clear what this bug refers to. I think it is the functionality of checking parties being imported with plots against the extant parties and providing the submitting party with a list of parties that were not matched and perhaps close matches. It should also include the functionality of checking parties being created by forms with the extant party list.

We need a rule of what the submitter should do when parties do not match. Must he enter the party via a form, or can he override the rectification exception and demand insertion into the database? I think the latter, but am uncertain.

As Mike is working on the forms issue, I will reassign this bug to him, with the expectation that he will pass it on to Gabe relatively soon.

this is part of a larger rectification piece that is almost entirely handled by VegBranch

- This bug has been marked as a duplicate of 748 ***

#5 - 01/31/2005 02:53 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
