depend on bug 748

#2 - 04/19/2003 07:01 AM - Robert Peet

There is less damage in allowing proliferation of place names. Nonetheless, the submitter should be given a warning that the placenames no not match.

Once a submitted data set has generated a bunch of rectification mismatch statements, the submitter is going to need some way to override the exceptions where appropriate. This will carry over to other rectification components (eg Parties). Would be nice if the report from the tool came back as a web form where one could click to override individual entries or topical clusters of entries. Then the form could be submitted as part of the next attempt to load. Mike & Gabe should give this some thought and then pass some design ideas back to me for discussion.

Do we want/need a web form for adding place names? If so, this too needs rectification. Perhaps can pupt that off to version 2?

- Bug 761 has been marked as a duplicate of this bug. ***

#4 - 11/21/2003 11:48 PM - Michael Lee

- Bug 762 has been marked as a duplicate of this bug. ***

#5 - 11/08/2004 07:53 PM - Michael Lee

this is part of a larger rectification piece that is almost entirely handled by VegBranch

- This bug has been marked as a duplicate of 748 ***

#6 - 01/31/2005 02:54 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
