History

#1 - 01/14/2003 09:36 AM - Michael Lee

VegBranch beta 4.0 is ready to release! Waiting until I have permission to write to tekka before distribution is possible. Still need much testing by others to see if it meets their needs.

The basic new improvements of b4.0 are:

Plants and communities fully implemented (except for lineage tables)

Simplified format on as many forms as possible

Help/documentation has been fully enclosed in VegBranch (no more help files to download)

Plant and communities that are in the vegbank module of VegBranch can be queried directly by name - users are no longer required to have a species list or list of communities they expect to use.

Automatic bug reporting from main menu to Bugzilla -- Users can report bugs to bugzilla via the main menu and can log-in to Bugzilla automatically through an anonymous account (vegbranch@hotmail.com), or they can report bugs with their own account.
