This bug depends on the interpretation of what bug 771 is. If 771 is simply an XML doc that maps values from one set of values to another, then an internal form could be used (such as in VegBranch) and the XML doc generated from that. If 771 means that the user would translate values on upload for NPS and XML plot uploads, then this is much much more complicated (user would have to do this plot-by-plot)!

1

- This bug has been marked as a duplicate of 771 ***

#3 - 01/31/2005 02:54 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
