Blocks VegBank - Bug #1220: Need systematic approach to viewing all data in d...			Resolved 11/21/2003

History

#1 - 01/08/2003 10:39 PM - John Harris

This refers to a feature that allows a user to interpret the community associated with a plot stored in vegbank.

#2 - 01/14/2003 01:22 PM - Michael Lee

This is a more commonly used bit of data that users will want to add outside of a plot. Also somewhat simple in implementation -- simple form linked to one or two tables. (A bit more for community -- but this functionality is quite central to what we're working on.)

#3 - 10/02/2003 08:45 AM - Michael Lee

First, Lee should design the form, pass to Peet/Jacobs/Gramling/others for evaluation. Then bug should be passed to Mark for implementation, then back to Lee for QA, then back to others for evaluation and suggestions for improvement.

#4 - 10/15/2003 04:16 PM - Michael Lee

really would like this by the meeting.

#5 - 10/30/2003 12:48 PM - Michael Lee

no time left. These must sadly be pushed back to version 1.0.0

#6 - 06/02/2004 06:29 PM - Michael Lee

not really Nov1, but sooner than other bugs

#7 - 06/03/2004 07:43 AM - Michael Lee

depends on CRUD
see example: <http://tekka.nceas.ucsb.edu/~lee/forms/interpPlotToComm.html>

There must be a link to the interpreting page from the plot summary/comprehensive plot view. Then the actual form needs to link to other information available.

At one point we had tokens that represented the closed list values, which would be useful here. Hardcoding not a good idea.

Similarly, we need to think about a standard way to pull all the available references into a picklist and/or search for them (since there will soon be many).

#8 - 01/21/2005 12:13 PM - Michael Lee

Simpler option exists, where we could only use the one party of the current user and only allow one community per interpretation. This should speed up the development process greatly.

http://aldo.vegbank.org/~lee/form_templates/commClass_simple.html for example of what it'd look like and where the form fields would map to in the db (generally)

#9 - 02/10/2005 03:52 PM - Michael Lee

needs to have a link to the query and "Browse" for community pages, if available

#10 - 07/22/2005 08:23 AM - Michael Lee

It's been happening recently and is done? Needs to be hooked into observation_comprehensive view.

#11 - 07/22/2005 05:21 PM - Michael Lee

this bug, first talked about by John Harris: 2003-01-08 22:39:30 is FINALLY

DONE!!!!

Query a plot, view its details, then follow the link where it talks about comms to interpret it.
