Blocks VegBank - Bug #1220: Need systematic approach to viewing all data in d...		Resolved	11/21/2003

History

#1 - 01/09/2003 09:44 AM - John Harris

This is a feature request for any vegbank user to interpret a plant identified with a plot that exists in vegbank.

#2 - 01/14/2003 01:29 PM - Michael Lee

lower priority meta data that still needs connecting, but less urgently than the other methods with 1.0.0beta2 or 1.0.0.

#3 - 10/02/2003 08:46 AM - Michael Lee

First, Lee should design the form, pass to Peet/Jacobs/Gramling/others for evaluation. Then bug should be passed to Mark for implementation, then back to Lee for QA, then back to others for evaluation and suggestions for improvement.

#4 - 10/15/2003 04:16 PM - Michael Lee

really would like this by the meeting.

#5 - 10/30/2003 12:48 PM - Michael Lee

no time left. These must sadly be pushed back to version 1.0.0

#6 - 06/02/2004 06:29 PM - Michael Lee

not really Nov1, but sooner than other bugs

#7 - 06/03/2004 09:10 AM - Michael Lee

This can be done without CRUD, but eventually we will need to add it for weird interpretations. This can be a 2 step or 3 step process depending on where we want to link into the process. I have in mind a 3 step process:

- 1) when viewing plot, state that you want to interp taxon
- 2) select taxon from a list (that is taxonObs on this plot)
- 3) specify what plant concept you think this is

see <http://tekka.nceas.ucsb.edu/~lee/forms/interpTaxonToPlant.html> for this 3 step process.

Could be 2 steps by combining 1 and 2. When viewing plot, a link would exist by each plant saying "interp this plant" but I think that would clutter the screen for a seldom used function. Wiki page will be created that will further discuss this stuff.

#8 - 08/10/2004 09:55 AM - Michael Lee

This now works beautifully on vegbank

#9 - 01/31/2005 02:53 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
