Morpho - Bug #81

need ability to "round-trip" metadata (mde -> server -> querybean -> mde)

Description

Currently, there is no way to totally manage server-based metadata from the client because one cannot easily transfer metadata documents among the modules of dmanclient. Need to make it so that mde can seamlessly upload metadata to the server (done, needs UI improvements), then when the querybean finds one of those documents in a search, the user can right click on the record and choose "Edit" from a popup menu to open the metadata document in mde. This reuires that a single-click on the resultset record only selects the record, so that the user can right click to get the popup menu. Consider making a standard interface among the modules for transferring a metadata document from one module to another.

History

#1 - 08/20/2000 08:27 PM - Matt Jones

linked to bug #82 for UI changes.

#2 - 08/24/2000 12:19 PM - Matt Jones

Increased the priority and severity on this bug, as it is an extremely important feature of the client.

#3 - 09/01/2000 03:29 PM - Dan Higgins

pop-up menu now attached to result set tables with edit function (also view function)Edit function tries to open the document in metadata editor

#4 - 09/01/2000 06:09 PM - Matt Jones

Reopened because the document does not cache the docid that is returned from the server in the mde document when it is opened from the query window, nor when it is a new document and is saved to the database. Thus, each time one does "Save to database", a new document is generated (via INSERT). This is related to bug #91 because it involves the synchronization of docids. This bug shoud stay open until a document can be cleanly created, saved to the db, queried, edited, and resaved to the db without any lost docid information.

#5 - 10/04/2000 04:28 PM - Dan Higgins

Current version of MORPHO can edit a document returned in a query and then submit revised document back to server.
