

VegBank - Bug #824

Make website deal with user tables in vegbank, not framework

11/13/2002 01:56 PM - Michael Lee

Status:	Resolved	Start date:	11/13/2002
Priority:	Immediate	Due date:	
Assignee:	P. Anderson	% Done:	0%
Category:	misc	Estimated time:	0.00 hour
Target version:	1.1.0	Spent time:	0.00 hour
Bugzilla-Id:	824		
Description			
Ok for now. Need autofill in the certification form.

Need to make sure that certification documents are emailed to the appropriate parties when someone requests certification. This list of parties probably should be an XML doc somewhere so that we could change easily who will get the emails.

additionally, all fields that are public in the certification form need to be editable from the "edit profile" page :
framework/servlet/usermanagement?action=changeusersettings

#4 - 10/02/2003 12:08 PM - Michael Lee

profile database (framework) does not need revision for the Nov1 milestone. Certification just needs to work. After certification functionality works, put this bug in the 2.0 bucket.

#5 - 11/07/2003 02:37 PM - P. Anderson

If a user is not logged in, fills out entire form, submits, message says, "log in" and the form data is lost. Bad news for user.

Also, "What do the levels mean?" link is broken.

Also, since only logged in users can apply for cert, we don't need the email address to be entered, or at least we can auto populate it.

#6 - 11/08/2003 11:46 AM - Michael Lee

Mark, your comments above I agree with. The "what do these levels mean" link is perhaps being screwed up by renegade javascripts elsewhere in the page, ie footer and header. This wasn't a good idea on my part and I will be removing them. We can find another way of linking someone to context sensitive help.

#8 - 11/11/2003 12:13 PM - Michael Lee

Mark, I'll take this bug for now, with focus on model change implications. Sounds like the certification email is working better now- just need to get the from: address sorted out.

#9 - 11/11/2003 12:15 PM - Michael Lee

more info, akin to data-dictionary on its way

#11 - 11/12/2003 10:30 AM - Gabriel Farrell

I see no problems with the ERD id=89 particularly in relation to user, certification, userPermissions and embargo, userDataset and datasetObs tables.

Supporting the userQuery, recordOwnership, partyMember and userNotify are over my horizon for now but the model looks good.

I am concerned about the SQL queries stored in the userNotify and userQuery as there may be a more abstract way to do this that would be more robust to model and system changes, what that way might be is unclear to me so its a moot point for now.

Also we currently have no way to persist user preferences we may want to add another table(s) later to support this. This can be ignored for now in the interest of finalizing this good work and getting it in place.

#12 - 11/21/2003 09:10 PM - Michael Lee

Once again changing the nature and summary of this bug. Here is the task of making the website work with the correct, new tables inside vegbank, not in framework. Certification, authentication, log-in, etc. all need to now read through the new tables, which are presumably populated and happy in vegbank.

#13 - 02/29/2004 06:09 PM - P. Anderson

New user system works great now!

#14 - 01/31/2005 02:53 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.

#15 - 03/27/2013 02:15 PM - Redmine Admin

Original Bugzilla ID was 824
