Description

Need to create javadoc documentation for all public and protected methods and fields in dmanclient. See the format used in xmltodb for formatting. These are particulary needed for the querybean can dtclient packages, and the mde documentation needs to be brought up to date.

History

#1 - 08/23/2000 11:17 AM - Dan Higgins

I consider this relatively low priority as long as code is changing. (User won't look at javadoc anyway; developer can always generate it himself)

#2 - 08/24/2000 12:12 PM - Matt Jones

Increased the priority and milestone for this. I consider it a high priority for developers to keep all of their code documented as they write it. This doesn't mean they need to create the javadoc html pages, but only that all public and protected methods and fields should have javadoc comments in the code so that other developers (like me) can understand how the code works, in its current state. Any complex algorithms should be documented in the code as well, so that the intent of the complex algorithm is clear to others reading the code. At a minimum, the purpose and approach used in each class should be documented for the class overall.

#3 - 08/06/2001 09:07 AM - Dan Higgins

Javadoc documentation now exists in all classes
