This must be designed my michael, evaluated by bob, implemented by gabe. Pass the bug along to the others as one portion gets completed.

#4 - 11/22/2003 12:30 AM - Michael Lee

high level of user customization: user selects fields to view on plots

#5 - 07/21/2005 06:23 PM - Michael Lee

some of this is underway currently, using inline styles to alter what gets shown. Ideal solution would be to store user's preferences in a directory with their user ID and several views that they have preferences on. Then styles could be included with a <link>. the generic (unlogged in user) would have views similarly defined, but not editable by users. Any missing .css would just be ignored.
